Sr. No.	Material issues identified	Indicate whether risk or opportunity.	Rationale for identifying the risk/opportunity	In case of risk, approach to adapt or mitigate	Financial Implications of the risk or opportunity (Indicate positive or negative implications)
1.	Emissions & Climate Change	Risk	Risk: The Company recognizes that climate change and global warming pose severe climate risks for every organisation around the world. Climate risks include physical risks, transitional risk, liability risk and reputational risks. In addition, carbon pricing mechanisms are becoming prevalent and companies with high emission intensity will be subjected to high transactional taxes and incur high cost for energy, transport, and raw materials.	- We are monitoring our emission intensity in Scope 1 and Scope 2 categories. Regarding this, we have started actions towards reducing the GHG emissions in future. - Strategically, we aim to reduce consumption of fossil fuels and transition to cleaner fuels. Further, we are planning to increase our renewable mix to reduce dependence on grid electricity.	Negative: Implementing emissions reduction measures and transitioning to low-carbon technologies may involve significant investments in the short-term.

Sr. No.	Material issues identified	Indicate whether risk or opportunity.	Rationale for identifying the risk/opportunity	In case of risk, approach to adapt or mitigate	Financial Implications of the risk or opportunity (Indicate positive or negative implications)
2.	Circular Raw Materials and Efficient Waste Management	Opportunity	Opportunity: For us, repurposing and utilizing hazardous waste not only cuts down on the costs linked to waste disposal but also diminishes the need for acquiring fresh raw materials. We are confident that circular economy strategies would lead to product innovation and promote manufacturing with recycling in mind along with retrieval and reuse of waste.	- We have collaborated with plastic collection & recycling vendors to meet EPR targets. - We are also planning to increase our sale of such products where we use Intermediate Bulk Containers (IBCs), as these are reusable in nature.	Positive: - Hazardous waste reuse can reduce operational costs. - Encouraging recyclability and circular economy initiatives for packing materials can lead to resource efficiency and cost control in the longer run.
3.	Occupational Health & Safety	Risk	Risk: Unsafe working environment can lead to high workplace injuries and accidents and failure to comply with occupational health and safety regulations can result in legal consequences and fines. Also, frequent accidents or health issues can lead to increased absenteeism and Lost Time Injury (LTI).	- We have implemented ISO 45001:2018 occupational health and safety standard at both our plants. - Our operations are guided by our integrated policy on Quality, Health, Safety & Environment (QHSE) to ensure a safe and healthy working environment across all plants and offices. The Company has in place proactive measures like Hazard Identification and Risk Assessment (HIRA), Hazard and Operability study (HAZOP), Process Safety Management (PSM) and Safety Audits. - We have implemented Standard Operating Procedure (SOPs) and safety protocols for all employees and workers to follow, preventing damage to life and property. - We provide safety training to employees & workers and conduct regular risk assessments.	Negative: - OHS is critical to prevent accidents and casualties. If workplace accidents or health-related problems occur, the associated costs may encompass initial medical care, hospitalization expenses, rehabilitation services, and continuous healthcare for affected employees. - Employees who are injured or unwell might need time off for recuperation, leading to reduced efficiency. This can have repercussions on overall productivity and potentially result in missed business opportunities
4.	Energy Management	Opportunity	Opportunity: Organisations around the world are implementing energy-efficient practices and technologies, leading to significant cost savings in utility bills. We embrace energy management and consider improving our renewable mix which would lower our utility cost in the long run along with carbon footprint reduction	We regularly undertake energy efficiency projects.	Positive: - Investments in energy-efficient technologies and systems may have an initial cost, but organizations can realize a positive return on investment over time through reduced energy expenses. - Energy-efficient equipment often requires less maintenance, leading to lower maintenance costs over the lifecycle of the equipment.

6.	Chemical Management	Risk	Risk: We understand that improper handling, storage, or disposal of chemicals can lead to accidents, spills, leaks, or exposure, posing serious health and safety risks to employees, surrounding communities, and the environment. Further, incidents related to improper chemical management can lead to negative publicity, damage the Company's reputation, and erode consumer trust.	- We abide according to the Hazardous and other Wastes (Management, and Transboundary Movement) Rules, 2016 issued by Government of India. - Most of our products are compliant with Restriction of Hazardous Substances (RoHS) regulations and product exported to European Economic Area (EEA) are also REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals) compliant	Negative: Accidents or regulatory non-compliance can lead to financial repercussions, including cleanup costs, legal fees, fines, and potential lawsuits. The Company may also face increased insurance premiums or difficulty while obtaining insurance coverage.
7.	Community Engagement	Opportunity	Opportunity: Positive community engagement builds a strong reputation for the Company as a responsible and socially conscious entity. Also, many investors and financial institutions look into social contributions and CSR spending of Company before investment.	We engage and address concerns of our community transparently and execute CSR initiatives to promote education to children. We regularly monitor the regulatory changes to stay updated on new requirements. Further, we assess the potential risks and non-compliance issues that may arise from regulatory requirements.	Negative: Non-compliance can result in legal actions, fines, and penalties, potentially leading to severe financial losses
